# **Mark Scheme**

2008 examination - June series

www.theallpapers.com

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

- 1 Jacob Van Ruisdael, <u>Banks of a River</u>, 1649.
- (a) How has the artist represented Nature in this painting?
- with grandeur: panoramic sweeping view; dramatic light/weather effects; broad massing of light/dark areas
- not idealised: prominent gnarled tree; grey clouds in sky; dark tonality/shadows; rutted paths
- overpowering: figures and distant town very small in relation to landscape; peasants have to 'labour' against natural forces; Nature dominates
- economic source/provides work for humans: figures at work; peasants on way to/from market in distant town
- erosion of bank/trees/paths imply effects of nature on shaping the landscape over time
- distant church spires allude to God's creation of Nature
- with realism: natural light, particularised detail indicate realist aim though not a direct transcription of one place; but real aspects have been selected and composed to make scene such as contemporary dress/architecture, rivercraft.
- (b) Comment on the artist's depiction of space in this painting.
- from a high view point, allowing for high degree of information and a certain detachment from scene
- low horizon (just less than half) large sky add to sense of grandeur and deep space
- panoramic view gives sense of great depth/distance
- diminution of scale especially town adds to illusion of great distance
- overlapping forms: space cut off at left by tree; river winds behind implying continuation of space; clouds overlapped by horizon
- winding paths give sense of continuous space and distance
- bridge unites in left to right direction giving continuity
- small figures give scale and add to sense of grand dramatic space
- tone/light: broad tonal bands, dark foreground/lighter middle ground/light distance; sky reflected in river; all add to illusion of great space.

- 2 Edgar. Degas, <u>Hélène Rouart in her Father's Study</u>, c.1886.
- (a) How has the artist represented the figure and the setting in this painting?
- figure: standing, informally behind chair, left arm and both hands supported by chair back; body slightly turned to left
- serious, solemn, not smiling; melancholy, faraway look, eyes don't meet our gaze
- figure: dressed in everyday clothes, not idealised, in familiar surroundings; 'unposed'; hands prominent
- figure: surrounded by contents of father's study, art collection, papers; setting/objects almost as important as sitter; adds to personal/intimate atmosphere
- father's empty chair and papers prominent in foreground; denotes his absence, contributes to sense of his personality/profession
- informality of setting; cropped, informal composition.
- (b) Describe the use of colour in this painting.
- limited range
- warm, earthy, oranges/browns/pinks dominate; in harmony with sitter's red hair/ 'Venetian' colouring, focal point of painting; perhaps at its strongest in sitter's hair (with light catching top of head), and chair back
- complementary contrast of blue/orange; cool/warm contrast
- tonally muted; muddy colours; frame/contents of glass cabinet, wall behind figure; strongest hues in figure, Chinese wall-hanging and painting behind left shoulder
- image united by overall rich, subdued colour which contributes to intimate, sympathetic atmosphere/mood, sombre
- naturalistic use of colour.

- 3 Andrea del Verrocchio, David, c.1465.
- (a) Discuss the representation and interpretation of the figure in this sculpture.
- idealised yet naturalistic with classical references; elegant pose; slim proportions
- generally relaxed but muscles on left arm and hand tensed
- proud, confident, heroic, looks out directly
- elegantly dressed in Roman style breastplate, kilt and high boots
- pose: weight on right leg, right arm by side gripping lowered sword; left arm firmly on hip suggesting triumphant man of action
- youthful/athletic
- victorious; standing over slain head.
- (b) How have the techniques of modelling and casting been exploited in this sculpture?
- excessively smooth patina and highly polished surface contributes to elegance and refinement
- sharp detail on hair, features, decorative details on dress, Goliath's head adds to realism
- rippling muscles on right arm/folds of skirt made possible by modelling
- upright, unsupported figure, projecting arm and sword made possible by tensile strength of bronze; angularity
- association of bronze male figure with classical heroes
- separate casting of Goliath's head and sword.

- 4 Henry Moore, <u>Reclining Figure</u>, 1939.
- (a) Comment on the sculptor's representation of the figure in this sculpture.
- figure represented reclining on left arm, knee bent, head raised, relaxed pose
- simplified, no detail
- static, stable
- abstracted; not naturalistic; but recognisable aspects of female form; head, arms, breasts, knees, buttocks
- horizontal emphasis; only head projects above upper line
- predominantly rounded, organic forms/hollows
- human forms synthesised with natural forms/imagery, bones/shells/caves/hills
- solid/void contrast; positive space; concave/convex contrast
- internal silhouettes; changing views of flowing/swelling rhythms.
- (b) How have the qualities of wood affected the appearance of this sculpture?
- long, low, narrow(ish) format determined by dimensions of tree trunk
- length and strength of trunk lends stability and scale evoking timelessness/permanence
- natural warm colour/graining of wood retained/visible; direction of grain respected
- unbroken outlines (apart from head) due to difficulty of carving projecting forms
- visible tool marks
- correspondence between natural wood and organic forms exploited
- polished, relatively smooth surfaces enhance natural/organic imagery; sense of eroded forms, hollows and bumps
- qualities of wood enables easy drilling and carving to achieve positive spaces and opening out of form.

- 5 Baldassare Longhena, <u>Santa Maria della Salute</u>, 1630-1687.
- (a) Identify and describe the architectural features of this building.
- hemi-spherical dome on octagonal base with pierced lantern: dome has small oeils-de-boeuf; lantern; subsidiary cupola with pierced lantern
- large spiral volutes/scrolls connecting base of dome to lower body of church
- double height arched entrance with smooth shafted engaged Corinthian columns, on high pedestals, with entablature, pediment which apparently breaks forward obscuring a secondary façade, with identical Corinthian order
- round arched windows between projecting side chapels on lower storey; twinned arched windows on base of dome
- side chapels: four Corinthian pilasters support entablature on lower storey; tripartite lunette window framed by two pilasters which support a pediment on upper storey
- imposing flight of steps
- pierced bell tower with segmental pediments and lantern.
- (b) Comment on the style and appearance of this building.
- grand scale: monumental dome; double height 'Triumphal arch' entrance, with columns on high pedestals; grandiose steps; giant scrolls
- very ornate: profuse sculptural decoration; niche sculptures; almost no plain wall surface; two levels of free-standing sculptures, (on top of volutes and at corners of each pediment); garlands; Corinthian capitals; sculptures on top of lanterns.
- dynamic/exuberant composition: 'picturesque' asymmetrical grouping of dome, cupola, bell tower (campanile); enhanced by setting
- irregular silhouettes: octagonal plan; projecting side chapels; free-standing sculptures silhouetted; obelisks at base of lantern
- little flat surface; recesses and projections giving play of light and shadow
- imposing mass of stone 'worked' into a complex theatrical image.

- 6 Deane and Woodward, The University Museum, Oxford. 1855-60.
- (a) Analyse the composition of the façade of this building.
- horizontal emphasis: four horizontal bands, basement, lower and upper storeys, roof
- bands all run continuously through central tower apart from at roof level; further emphasised by band of small paired windows above dormers and by banding of different coloured stone
- central tower provides vertical contrast; divides façade into three
- tower itself has four clearly articulated elements-arched entrance, triple light window, double-light window above, capped with high triangular shaped roof
- symmetry (ordered): three bands of six windows on each side of central tower on each horizontal band
- but not absolutely aligned between lower and upper storeys, nor perfectly symmetrically placed in lower storey
- flat façade with minimal projection of central tower
- regular repeated pointed triangular shapes with little/slight variation: windows, roof of tower, gables of main block roof; relieved by larger, echoing features of tower.
- (b) Identify the architectural elements and decorative features of this building.

## Architectural elements

- tower with high roof; incorporates decorative features on triple arch (larger version of windows on second storey); roundels and coloured stone on upper storey; cornice.
- steeply pitched roof incorporates bands of plain triangular dormer windows and smaller vents.
- polychromatic stone banding
- window colonettes.

## **Decorative features**

- bands of repeated pointed arched windows both architectural elements and decorative features
- windows on second storey treated more decoratively than lower storey: decorative coloured stone surrounds arches; circular windows above twinned windows
- simpler, less ornate, triangular gabled dormers and vents in roof
- carved portal.

Other points considered to be valid to be given credit.
