

**Cambridge International Examinations**  
Cambridge Pre-U Certificate

---

**BIOLOGY (PRINCIPAL)**

**9790/04**

Paper 4 Practical

**For examination from 2016**

SPECIMEN MARK SCHEME

**2 hours 30 minutes**

---

**MAXIMUM MARK: 80**

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 3 Pre-U Certificate.

---

This document consists of 7 printed pages and 1 blank page.

The following abbreviations may be used in mark schemes:

/	alternative and acceptable answers for the same marking point
;	separates marking points
allow/accept/A	answers that can be accepted
AVP	any valid point – marking points not listed on the mark scheme but which are worthy of credit
AW/owtte	credit alternative wording / or words to that effect
ecf	error carried forward
ignore/I	statements which are irrelevant – applies to neutral answers
not/reject/R	answers which are not worthy of credit
ORA	or reverse argument
(words)	bracketed words which are not essential to gain credit
<u>words</u>	underlined words must be present in answer to score a mark

## Section A

Question	Sections	Indicative material	Mark
1 (a)	MMO Decision making	at least five different concentrations of bile salts ; <i>could include 0%</i> control (water) included ; dilutions agree with concentrations chosen ;	[3]
(b)	MMO Decision making	0% / water ; use boiled lipase ;	[2]
(c) (i)	MMO Decision making	<i>idea of</i> found end point when blue colour just no longer visible ; indicates when pH decreases to certain level ; as fatty acids neutralise sodium carbonate / AW ;	[3]
(ii)	MMO Collection	temperature within range $50 \pm 2$ °C at every one of at least three readings ;	[1]
(d)	MMO Collection  PDO Recording  ADC Display of calculation and reasoning  MMO Decision making	at least five results obtained and recorded in seconds ; times vary across tubes so that lower concentrations generally have longer times ; monotonic sequence of times vs. concentration ; replicates and means included ;  data recorded as a <u>single</u> table ; table includes columns for raw data (bile salts concentration, time taken) and calculated values (rate) ;  appropriate column headings with units in column headings ; e.g. bile salts concentration (%), time taken (s), rate ( $s^{-1}$ ) independent variable (bile salts concentration) in left hand column ; results recorded to same degree of precision within each column ;  rates calculated and given to appropriate significant figures ;  <i>accept three separate decisions even if not justified</i>  use of tube without thymolphthalein as colour comparator ; to identify end point ;  ref to including bile salts in colour comparator ; as bile salts give colour to milk ;  use replicates ; to check on reliability / repeatability ; <b>R</b> accuracy / precision  AVP ;; e.g. when to start timer	[7 max]  [1]  [max 3]

Question	Sections	Indicative material	Mark
(e)	PDO Graph	line graph, bile salts concentration on horizontal axis ; <i>ecf if time plotted, not rate</i> axes scaled correctly using at least half the graph paper ; axes titles and units – rate ( <i>ecf</i> from the table) and concentration ; points plotted accurately ; appropriate line that is not extrapolated beyond highest concentration ; if rate plotted, line starts at the origin ; <b>R</b> if broken axis	[5]
(f)	ADC Description of patterns and trends	increase in, <u>rate</u> / activity, with increase in concentration of bile salts ; <b>A</b> ref to decrease in time as <i>ecf</i> comparative data quote ; <i>% bile salts and rate/time at two different concentrations</i> ref to shape, e.g. straight line / exponential / plateau ; ref to anomalous result(s) ; <b>A</b> 'no anomalous results'	[max 3]
	ADC Conclusions	bile salts <u>emulsify</u> fats ; bile salts promote formation of micelles ; ref to hydrophilic and hydrophobic ends of each molecule ; increase surface area of, globules / AW ;  effectively increase substrate concentration ; lipase can only act on the surface of globules ; not water soluble ; hydrolysis / breakage, of <u>ester</u> bonds ; <i>release of fatty acids</i> (and glycerol) ; higher concentration of bile salts results in, more emulsification / higher substrate concentration ;  AVP ;	[max 7]

<b>(g)</b> Evaluation of procedures and data		
	<i>Identifying limitations and sources of error</i>	<i>Suggesting improvements</i>
<i>repeatability</i>	only one sample per concentration / no repeats / not enough repeats / should have been repeated ;	ref to <b>at least three</b> samples, mean / standard deviation / standard error ;
<i>end point / timing</i>	end point difficult to judge ; so <i>that</i> end point may not have been the same in each case ;  stated problem with timing ; <i>note that stopwatch should be started before mixing</i>  e.g. times all overestimates as started stop watch before adding lipase rates therefore underestimates ;	use colour standard ; <b>R</b> colorimeter  ref to improved timing method ; <b>R</b> have someone else to start the stopwatch  way to slow down the reaction e.g. lower temperature / more milk ;  set up separately / staggered start ;
<i>indicator</i>	ref to drops of phenolphthalein being inaccurate / AW ; use set volume of phenolphthalein ; colour changes over a range of pH ;	use, pH meter / pH probe and data logger / more sensitive indicator ;  record time to reach constant pH ;
<i>precision in preparation</i>	stated problem with syringe(s) ; <b>A</b> air bubbles / precision explained <b>R</b> liquid in nozzle  ref to, uncertainty / percentage error ;	use, graduated pipette(s) / burette / micropipette ;
<i>temperature</i>	problem with maintaining constant temperature ; data quote from <b>(c) (ii)</b> ; rate of reaction / activity, depends on temperature ;	use thermostatically-controlled water bath ;
<i>results</i>	ref to anomalous results ; difficult to identify line of best fit / AW ; ref to, range / error, bars ; not enough intermediate concentrations to determine trend ; not wide enough range of concentrations ;	ref to discard / repeat ;  use SD / SE / 95% CI as error bars ;  <u>stated</u> intermediate concentrations ;  use concentrations of bile salts > 5%
		[10]
		<b>[Total: 45]</b>

## Section B

Question	Sections	Indicative material	Mark
2 (a) (i)	PDO Recording	drawing made with clear, complete lines ;	[1]
	MMO Collection	correct outline ; central canal ; outline of grey matter shown appropriately ; <i>labels</i> grey matter, white matter ; meninges / AW / connective tissue / blood vessel(s) ; dorsal fissure / ventral fissure / dorsal horn / ventral horn ;	[max 5]
(ii)	ADC Conclusions	size of specimen and drawing recorded to nearest mm and calculation given as image size/actual size ;	[1]
	Display of calculation and reasoning	correct answer given for quoted size with no more significant figure than size with lowest number of significant figure ;	[1]
(b)	PDO Recording	drawing made with clear, complete lines ; drawing shows clear cellular detail of the motor neurone cell body ; e.g. <i>nucleus, nucleolus, (Nissl) granules / bodies</i>	[2]
	MMO Collection	<i>labels</i> dendron(s) / axon ; nucleus, nucleolus ; (granular) cytoplasm ;	[3]
	ADC Interpretation of data and observations	<i>annotations</i> reception of impulses from, sensory neurones / interneurons ; initiating impulses to effectors ;	[2]
	ADC Display of calculation and reasoning	diameter of cell body given with appropriate unit with correct derivation ; <i>calibration may be given or may already be known – but to gain the mark the calculation showing conversion of eyepiece units to micrometres must be clear</i> <i>accept result in mm/m expressed in standard form notation</i>	[1]
